COMPRESSION,

A black and white photograph of three people standing in a forest. On the left, a man in a dark long-sleeved shirt with a logo and shorts. In the center, a woman in a dark long-sleeved top and leggings. On the right, a man in a dark tank top and leggings. They are standing on a path with sunlight filtering through the trees. A black banner with white text is overlaid on the image.

WELCOME TO SUPERIOR COMPRESSION.

Sparked by a desire to create a powerful product with amplified impact, BASE Compression is an authentic compression wear brand crafted with a conscience.

Founded in 2019, we are on a mission to positively impact our planet, our people and our athletes. Designed in Australia, we have an ethical and responsible manufacturing process, using fabrics crafted through years of testing and applied innovation.

OUR BRAND.

At BASE, we create crafted compression with a conscience.

Our products encourage your well-being and fitness, helping you to achieve your best performance and recovery. We want you to power through intensity, fortitude, resistance and recovery in sports and fitness at all levels.

However, we're also an Australian brand that is restorative and regenerative by design. We're on a mission to incorporate as many circular materials as possible and keep our environmental impact absolutely minimal.

We're not perfect – but we're continually trying to understand and improve our impact on the world around us.

OFFICIAL BASKETBALL COMPRESSION PARTNERS

THE BENEFITS.

Compression garments can revolutionize your workout and recovery experience, and BASE Compression is a brand that offers unique benefits to both.

By wearing compression during your workouts, you can improve blood circulation and warm up your muscles before training or game-day performance.

This support can enhance your overall performance and reduce muscle fatigue during exercise. The flexibility and pressure of BASE Compression fabric can also support you with greater stability and muscle support during your workout.

Post-workout, wearing recovery compression garments can speed up your recovery process by reducing muscle fatigue and promoting efficient blood circulation. Compression garments can also help reduce swelling and speed up muscle repair.

The minerals in every fibre of the BASE Recovery Tights are used for their thermo-reactive ability to convert body heat into infrared energy and reflect it back into the body. This gives you a renewable energy source by stimulating cell performance and regeneration. Enhanced cell function means injuries heal quicker, the pain subsides faster and stamina and endurance are amplified.

The circulatory system is also the body's heating and cooling regulator. By optimising blood flow, our Recovery Tights makes it easier for your body to maintain its ideal temperature. Infrared energy boosts the flow of blood to tissue throughout the body, delivering vital nutrients while increasing oxygen levels. By loading our mineral blend directly into the fibre, the effects of our tights will never diminish through washing or wear like coated textiles.

20-30 mmHg - Provides a firm level of compression. This level of compression pressure helps improve blood flow back to the heart and oxygenation to working muscles.

For training and performance, the long short can be worn on their own or under garments, it provides you with muscle support, reduced chafing, and reduced muscle fatigue. Designed with an exclusive high-quality Nylon and Lycra® fabrication for breathability, durability, and body temperature regulation to get you through your intense training sessions.

“ To ensure that our athletes have every possible athletic advantage on game day, it requires not only a great amount of intense training, but also proper recovery.

Having a high-quality compression partner such as BASE partner with our team, further supports our aligned values and is a partnership I am very grateful for. I look forward to our athletes utilising the benefits of BASE Compression garments throughout the NBL competitive season.

COMPRESSION SOCKS

WHITE/BLACK
NYL/POLY/ELAS
FIRM: 20-30 mmHg
SKU BUS0131

Our Compression Socks provide an athletic compression profile that's second to none. Experience energy return in a sock that supports you while you train or recover.

Compression contracts the blood vessels, forcing blood back to the heart, preventing blood pooling in the legs and therefore improving circulation and blood oxygenation. Run, jump, and train with a breathable, moisture-wicking knee-high sock that is designed for all athletes.

COMPRESSION CALF SLEEVE

NYL/POLY/ELAS
FIRM: 20-30 mmHg
SKU BUCS222

Our Compression Calf Sleeve provides an athletic compression profile that's second to none. Experience energy return in a sleeve that supports you while you train or recover.

YOUTH.

Our Long Sleeve Tee will regulate your body temperature more than conventional fabrics. Chest, back and arm muscular support, reduced chafing with flat-lock seams, reduced muscle fatigue and risk of injury are just some benefits of this garment.

Designed with an exclusive high-quality Nylon and Lycra® fabrication for breathability, durability, and body temperature regulation, it's your only Base Layer.

BACK TO BASE.

**We have created products designed for performance, durability and quality.
Our products and brand are built with restoration and regeneration at it's core.**

As a business, we are constantly seeking and researching new technologies that enable us – and the industry – to explore more eco-conscious ways to repurpose what is already available. Our mission is to create a leading compression garment that better supports our environmentally sustainable values while never compromising on the quality they we are known for.

Our future goal is to repurpose our fabrics and completely refrain from using new materials for our products. We believe there is a better, more conscious, way forward and we are working closely with our valued teams and suppliers on how to improve the environmental impact of the factories we trust to make our fabrics and packaging.

We are supporting Project 166, a fantastic initiative on carbon sequestration and land restoration in Queensland, Australia. We can't wait to play our part in the regeneration and planting of trees, helping to make a more sustainable and stable future.

We are focused on returning the planet back to it's **baseline by recycling our garments. You wear it down and return it. We divert it away from landfills and make new products.**

**Crafted with
a conscience.**
